Keyboards & PC Mice 22/23

Alongside RaidSonic's renowned own brand ICY BOX®, KeySonic is the brand for keyboards and PC mice. The variety of keyboards is exceptional and fulfills the needs of the modern workplace as well as the industrial environment.

**FULL-SIZE. KOMPACT. MINI. SUPER-MINI.**

## ABOUT KEYSONIC

KeySonic is the own brand of RaidSonic Technology GmbH for input devices. The product line for keyboards and PC mice was launched in 2004 and has since developed in many directions. In terms of size, there are Full-Size keyboards, Compact keyboards, Mini and Super-Mini keyboards to choose from, as well as a rollable keyboard. Our surface finishes give you the choice of silicone-coated, aluminium or plastic keyboards. Wireless, Bluetooth® or wired keyboard models are available. Depending on your operating system, you can choose between Windows®, macOS® or Android™ models.

### Home & Office

For more than 15 years KeySonic has been present on the market with exceptional keyboards. Many years of expertise and the feedback from our customers have led to a constant improvement of the products as well as the adaptation to customer needs. The result: the right keyboard for every situation, whether you are working comfortably on Bluetooth® from the couch or value a slim design at the workplace. Let us inspire you!

### Industrial & Labs

In 2012, RaidSonic entered the special branch of industrial keyboards as the manufacturer of its own brand KeySonic and has significantly expanded its product portfolio with these specialized keyboards. Almost all of our industrial keyboards are certified according to protection class IP68, which enables thorough cleaning even in hygienic environments. With our acquired know-how over the last decade, we know exactly what matters in demanding environments.

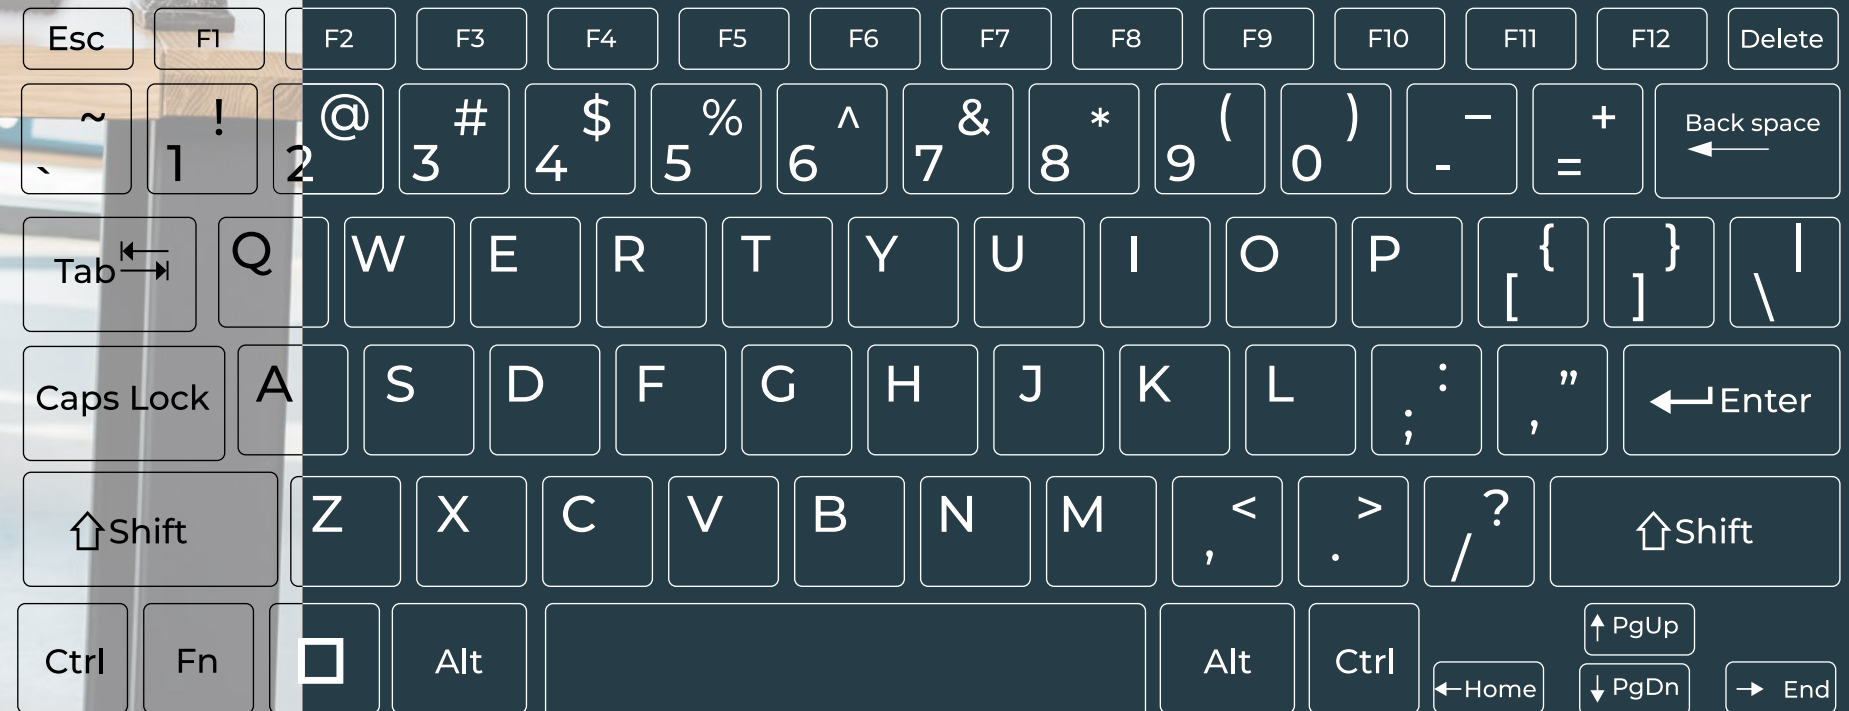

We are so pleased to announce the launch of KeySonic's very own website, dedicated to our keyboards and PC mice. Our extensive variety of input devices promise to meet our customers' needs and offer the right technology no matter where they're working from.

## NEW FEATURES IN FUNCTION & DESIGN

What is important to users when buying a keyboard? The criteria range from ergonomics, key layout and very good tactile typing feel due to the key technology used and extend to the type of connection, whether wired or wireless or with Bluetooth® connection. The location of use is also important, thus defining the texture and surface of the keyboard and also its size. In this respect, there is a comfortable selection of keyboards of different sizes, with and without a mouse or touchpad, and even a rollable silicone keyboard can be found in the portfolio.

# OUR BENEFITS

Anyone can produce normal keyboards. But what about when you're looking for niche products? Here it's worth taking a look at KeySonic's portfolio!

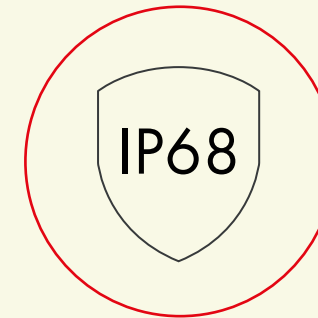

## For harsh conditions

The hygienic and industrial keyboards can be used even under the most severe conditions. Operating temperatures ranging from -20°C to +70°C and a humidity of 100% are no problem. With a service life of two million keystrokes for each individual key, KeySonic is a strong partner.

## Hygienically clean

Our hygienic and industrial keyboards are quick and easy to clean. The silicone coating means that cleaning agents such as disinfectants, water, detergents and alcohol can be used easily and safely to remove dirt, harmful bacteria or mould spores.

## Dust- and waterproof according to IP68

The hygienic and industrial keyboards are certified according to protection class IP68. This makes them 100% waterproof and dustproof. The silicone-coated keyboards can therefore be immersed in liquids just as easily as they can be washed in the dishwasher.

KeySonic hygienic industrial keyboards are enclosed and tightly sealed with a silicone coating. The surface has antimicrobial and fungistatic properties and counteracts the growth of fungi, mould and spores.

Thanks to their excellent resistance to a wide range of cleaning agents and disinfectants, the keyboards can be cleaned without any problems and the key inscriptions do not fade during cleaning.

# WIRELESS KEYBOARDS

Wireless keyboards offer a lot of flexibility, especially when working at home. But wireless input devices have also overcome the hassle of cables elsewhere. KeySonic offers keyboards with Bluetooth® or with a combination of Radio Frequency and Bluetooth® connection. The range is 8 to 10 metres, depending on the model. The model also determines the size and inclusion of a touchpad.

## KSK-8023BTRF Full-Size Bluetooth® & RF keyboard

- > Wireless keyboard with Bluetooth® and RF transmission
- > Compatible with Windows®, macOS® and Android
- > Pairing and switching between up to 4 devices
- > X-Type membrane technology for a quiet and smooth keystroke
- > Made from high-grade aluminium

# KSK-8023BTRF

## HIGH-TECH KEYBOARD WITH TALENT

What keyboard can do that? The KSK-8023BTRF provides three Bluetooth® and one radio frequency connections! This means you can pair up to four devices simultaneously and switch between them at will.

The wireless keyboard has a working radius of 8 m (26 ft). Charging time is 2-3 hours, after which you use the keyboard again with complete flexibility at the location of your choice. Made of high-quality aluminium, the keyboard also scores points on style. The X-Type membrane technology ensures a quiet and smooth keystroke.

## MULTIMEDIA AT THE TOUCH OF A BUTTON

The KSK-8023BTRF is equipped with useful function keys that are adapted to the various operating systems such as Windows®, macOS® or Android. Conveniently control your multimedia system using the function keys on your keyboard. You can also easily switch between Windows®, macOS® and Android via the keyboard.
